Muhammad Sarosh

Mobile Engineer | Flutter, BLE/GATT & IoT

sarosh.mobileengineer@gmail.com | linkedin.com/in/sarosh-tahir | mobileengineersarosh.vercel.app
Islamabad, Pakistan (UTC+5) | Flexible global time-zone overlap | Open to relocation

Summary

Mobile engineer with 5+ years delivering cross-platform products, including 10+ Bluetooth-connected applications and 5 published apps. Specializes in BLE/GATT lifecycles, device protocols, native Android/iOS bridges, OTA workflows, and turning hardware data into reliable user experiences from first connection through production release.

Technical Skills

Connected Devices: BLE/GATT, scanning, pairing/bonding, read/write/notify, packet protocols, reconnect, OTA
Mobile: Flutter, Dart, Riverpod, GetX, Clean Architecture, REST APIs, Firebase, local persistence
Native Integration: Java/Kotlin, Swift, Platform Channels, vendor SDKs, AES authentication, device services
Reliability & Delivery: State machines, packet parsing, testing, Crashlytics, CI/CD, App Store, Play Console

Professional Experience

Easy To Use Apps SRL **February 2026 - Present**
Mobile Engineer *Part-time | Remote*

- Integrated native iOS/Android monetization SDKs through Flutter, covering subscriptions, entitlements, remote paywalls, analytics events, and platform-specific purchase behavior.
- Built Node.js functions for Twilio authentication and scheduled notifications; improved onboarding by an observed 15% after Mixpanel-guided product changes.

Elite IT Team **September 2023 - January 2026**
Software Engineer (Mobile) *Full-time | Remote*

- Owned Outdey and UniX end to end as the sole Flutter developer and contributed across 3 additional client apps; 3 of the 5 reached public store release.
- Reduced redundant API calls by about 20% through caching and request deduplication across repeated product flows.
- Reduced crashes by about 35% through Crashlytics triage and cut build-to-tester time from about 30 to 10 minutes through CI/CD automation.

Sparkleo Technologies **August 2021 - August 2023**
Mobile Application Developer - BLE/IoT *Full-time | Islamabad*

- Delivered 10+ connected applications for wearable, medical, sports, access-control, RFID, LED-display, and environmental-monitoring hardware.
- Implemented scanning, connection, pairing/bonding, GATT discovery, reads/writes/notifications, typed packet decoding, recovery, reconnection, and OTA update workflows.
- Bridged vendor capabilities into Flutter through Java/Kotlin and Swift platform channels; documented shared BLE patterns and mentored other developers.
- Worked with embedded and product teams to validate hardware behavior, diagnose cross-platform failures, and turn device capabilities into usable mobile workflows.

Secure Mobile Access Credential

- Built tenant provisioning and native Android/iOS reader authentication using automatic reader matching, AES challenge-response, and callback-order-safe state handling for a private access-control integration.

Plyomat 2.0 App Store | Google Play

- Converted live jump-mat events into repeatable athlete assessments, contact/flight metrics, quadrant charts, local records, and CSV export; shipped on iOS and Android.

BlueDash App Store | Google Play

- Built a metadata-driven platform that discovers arbitrary GATT profiles, applies configurable byte codecs, and converts read/write/notify operations into reusable device dashboards.

Education

National University of Sciences and Technology (NUST) **2017 - 2021**
B.S. Computer Science *Islamabad, Pakistan*
