Muhammad Sarosh

Senior Mobile Engineer | Flutter, BLE/GATT & IoT

+92 303 4277385 | sarosh.mobileengineer@gmail.com | linkedin.com/in/sarosh-tahir | mobileengineersarosh.vercel.app

Islamabad, Pakistan | Open to remote, relocation, and employer-sponsored international roles

Summary

Senior mobile engineer with 5+ years delivering cross-platform products, including 10+ Bluetooth-connected applications for wearable, medical, sports, access-control, and environmental hardware; BlueDash and Plyomat are live on both stores. Specializes in BLE/GATT lifecycles, device protocols, native Android/iOS bridges, OTA, and explicit state handling for reliable hardware behavior.

Technical Skills

Connected Devices: BLE/GATT, scanning, pairing, read/write/notify, packet protocols, reconnect, OTA, state machines
Native Integration: Java/Kotlin, Swift, CoreBluetooth, BluetoothGatt, Platform Channels, vendor SDKs, AES challenge-response
Mobile: Flutter, Dart, Riverpod, Bloc, Clean Architecture, Hive/SQLite, REST APIs, Firebase
Delivery: Unit/Widget Testing, Crashlytics, GitHub Actions, Xcode Cloud, App Store, Play Console

Professional Experience

Easy To Use Apps SRL **February 2026 – Present**
Mobile Engineer *Remote | Part-time*

- Integrated Adapty, Superwall, and Mixpanel through Flutter and built Node.js services for Twilio authentication and notifications; contributed to a 15% improvement in the Mixpanel onboarding funnel versus the preceding period.

Elite IT Team **September 2023 – January 2026**
Software Engineer (Mobile) *Full-time | Remote*

- Owned Outdey and UniX as the sole Flutter engineer, from architecture and API/Firebase integration through public iOS and Android releases; worked across 5 client apps in total.
- Lowered Crashlytics-recorded crashes by about 35%, reduced repeated API requests by about 20%, and cut build-to-tester time from about 30 to 10 minutes with Xcode Cloud and GitHub Actions.

Sparkleo Technologies **August 2021 – August 2023**
Mobile Application Developer - BLE/IoT *Full-time | Islamabad*

- Delivered 10+ connected Flutter applications, including BlueDash and Plyomat released on both the App Store and Google Play.
- Owned complete BLE lifecycles: permissions, scanning, pairing, GATT discovery, reads/writes/notifications, packet parsing, reconnect, recovery, and OTA updates.
- Used narrow Kotlin/Swift platform-channel bridges when vendor SDKs lacked Flutter support, accepting extra native maintenance for reliable access to device-specific capabilities.
- Worked with embedded and product teams to separate firmware faults from mobile faults; onboarded and mentored 5 developers on BLE implementation patterns through documentation and code review.

Secure Mobile Access Credential Case Study

- Built tenant provisioning, assigned-reader matching, native BLE, and AES challenge-response across Flutter, Java, and Swift; removed an Android race by modelling challenge arrival and write completion as independent prerequisites.

Agade - Assistive Exoskeleton Companion Private product

- Designed a guided state machine for an exoskeleton and two bracelets, separating command acknowledgement from physical completion with independent timeouts and readiness gates.

Plyomat 2.0 - Bluetooth Sports Measurement Case Study | App Store | Google Play

- Converted jump-mat packets into live metrics and repeatable athlete assessments using explicit acquisition state and repetition gates; reached 500+ Google Play downloads.

BlueDash - Configurable BLE Platform Case Study | App Store | Google Play

- Built a platform that discovers arbitrary GATT profiles, applies configurable byte codecs, and turns read/write/notify operations into reusable device dashboards.

Education

National University of Sciences and Technology (NUST) **2017 – 2021**
B.S. Computer Science *Islamabad, Pakistan*
