Pakistan work authorization | Open to relocation | Open to employer-sponsored international roles

Summary

Senior mobile engineer with 5+ years delivering connected-device and multi-module consumer products, including 5 published apps: 3 at Elite IT and 2 at Sparkleo. Experience spans Flutter architecture, BLE/GATT, custom device protocols, backend services, native interoperability, CI/CD, and store release.

Technical Skills

Mobile Architecture: Flutter, Dart, Riverpod, Bloc, Clean Architecture, MVVM, GetX
Connected and Native: BLE/GATT, device protocols, state machines, OTA, Java/Kotlin, Swift, CoreBluetooth, BluetoothGatt, Platform Channels
Backend and Data: Node.js, REST APIs, MongoDB, Firebase/Firestore, SQLite, Hive, authentication, WebSockets
Product and Delivery: FCM, Maps, payments, subscriptions, Mixpanel, Crashlytics, testing, GitHub Actions, Xcode Cloud, App Store, Play Console

Professional Experience

Easy To Use Apps SRL **February 2026 -- Present**
Mobile Engineer | Flutter and Node.js product delivery *Remote | Part-time*

- Develop Flutter features and Node.js services across onboarding, authentication, subscriptions, notifications, and analytics-driven journeys.
- Kept Twilio authentication and scheduled-notification logic server-side to protect credentials and centralize trusted workflows, accepting an extra network hop over client-side execution.
- Implemented Adapty, Superwall, and Mixpanel purchase, entitlement, and paywall flows, contributing to a 15% improvement in the Mixpanel onboarding funnel versus the preceding period.

Elite IT Team **September 2023 -- January 2026**
Software Engineer (Mobile) *Full-time | Remote*

- Owned Outdey and UniX as the sole Flutter engineer, taking both multi-module products from architecture and integration through public iOS and Android releases.
- Used REST for transactional workflows and Firebase/WebSockets for realtime updates, accepting two synchronization models to keep core operations predictable and live interactions responsive.
- Reduced repeated API requests by about 20% in high-traffic flows through caching and request deduplication.
- Lowered Crashlytics-recorded crashes by about 35% through peer review and crash-led fixes.
- Automated iOS and Android distribution with Xcode Cloud and GitHub Actions, cutting build-to-tester time from about 30 to 10 minutes.

Sparkleo Technologies **August 2021 -- August 2023**
Mobile Application Developer *Full-time | Islamabad, Pakistan*

- Delivered 10+ Flutter applications for connected hardware, including BlueDash and Plyomat released on both the App Store and Google Play.
- Owned complete BLE lifecycles: permissions, scanning, pairing, GATT discovery, reads/writes/notifications, packet parsing, reconnect, recovery, and OTA updates.
- Used narrow Kotlin/Swift platform-channel bridges when vendor SDKs lacked Flutter support, accepting extra native maintenance for reliable access to device-specific capabilities.
- Used Riverpod/Bloc in workforce/location apps, Hive/SQLite for offline device records, and Flutter tests around app flows and native bridges.
- Onboarded and mentored 5 developers through protocol documentation, code review and hands-on toubleshooting; established a reusable BLE pattern adopted across 4 applications.

Selected Projects

BlueDash - Configurable BLE Device Platform Case Study | App Store | Google Play
Sparkleo Technologies | 2023

- Built a reusable platform that discovers arbitrary GATT profiles, applies configurable byte codecs, and turns read, write, and notify capabilities into dynamic device dashboards.
- Kept live control local while using JSON, Hive/SQLite, and Firestore for reusable configuration and sharing, then released the product on both app stores.

Plyomat 2.0 - Bluetooth Sports Measurement Case Study | App Store | Google Play
Sparkleo Technologies | 2022 -- 2023

- Converted jump-mat packets into live metrics and repeatable athlete assessments, using explicit acquisition state and repetition gates to handle incomplete messages and deterministic completion.
- Delivered charts, athlete history, configurable tests, device settings, and CSV export; reached 500+ Google Play downloads.

Secure Mobile Access Credential Case Study
Sparkleo Technologies | Private access-control integration

- Built tenant provisioning, assigned-reader matching, native BLE, and AES challenge-response across Flutter, Java, and Swift.
- Removed an Android race by modelling challenge arrival and write completion as independent prerequisites, with tests around the Flutter-to-native bridge contract.

Agade - Assistive Exoskeleton Companion
Sparkleo Technologies | Private connected-device product

- Designed a guided state machine for an exoskeleton and two bracelets. Separated command acknowledgement from physical completion using independent timeouts and readiness gates to prevent unsafe or contradictory actions.

Outdey - Events and Ticketing Case Study | App Store | Google Play
Elite IT Team | 2023 -- 2024

- Built Flutter and Node.js/MongoDB workflows for an events platform spanning discovery, payments, ticketing, host operations, chat, maps, and QR admission; shipped on iOS and Android.

UniX - University X Case Study | App Store | Google Play
Elite IT Team | 2024 -- 2025

- Developed a student platform spanning housing, marketplace, messaging, social networking, tasks, calendars, and notifications; stabilized REST/Firebase data flows and shipped on iOS and Android.

Additional Scope

- **Connected-device portfolio:** Built LED Scorer with seven sport-specific modes, a true 64-by-64 display preview, and a native Kotlin transfer bridge; additional work covered wearable ECG/PPG and breathing telemetry, RFID and location systems, sensor monitoring, relay control, firmware transfer, and OTA recovery.
- **Side projects:** Spring Boot/PostgreSQL services and Python-based RAG prototypes. GitHub

Education

National University of Sciences and Technology (NUST) **2017 -- 2021**
Bachelor of Science in Computer Science *Islamabad, Pakistan*
School of Electrical Engineering and Computer Science
